

# My Money Plan

Everyone needs a money plan no matter how much you make

## STEP 1

### Total Household Income

Total the income of everyone in the household.

## STEP 2

### Previous Month's Spending

Estimate how much you spent during the previous month.

Remember to include periodic expenses like vehicle registration.

Divide expenses by 12.

## STEP 3

### Total All Expenses

#### Remember to include:

- Home and Maintenance
- Utilities
- Transportation
- Family Costs
- Healthcare Costs
- Giving
- Food Costs
- Savings
- Leisure and Hobbies
- Debt Payments

## STEP 4

### Compare Expenses and Income

Compare your expenses with your total income for the month.

#### Remember:

Revisit your budget regularly to make sure you are capturing all your income and expenses.

## STEP 5

### Consider Savings Goals

If you have money left over, decide if you should be putting that money toward short-term or long-term savings goals.

If you came up short (negative number) look back over your expenses to see if there is any way to spend less.
